**4 WAY JOINT**

**BOTTOM OF SYSTEM**

Molle Audi, Overland Park, KS  
Piper + Wind, Architects.

Our SSM 200 system utilizes a route & return, 2 inch nominal panel thickness. Featuring a half inch open & dry joint, the SSM 200 provides an effective rain screen solution.

Underneath, a concealed water & air barrier provides for an improved weather resistant system with the heavy lifting being executed by the panel system. This non-progressive solution allows for independently removable panels on a vented wall cavity and results in a crisp & clean design aesthetic.
