

SSM - Series 300

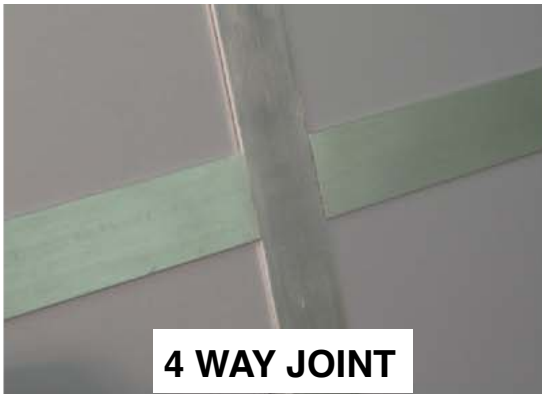

Standard Sheet Metal's SSM 300 gets the job done cleanly and economically. Our perimeter hardware attachment panel system features a high end look without the associated fabrication costs.

Mission Trails Middle School Olathe, KS
Hollis & Miller, Architects.

A stick framing concept, with simple sheet goods, this solution allows for a progressive or an optional non-progressive installation sequence. This allows for the future removal & replacement of damaged panels.

Extrusions form a perimeter frame to capture the panel and can be painted to match or another color for a more dynamic look.
